Open Ph.D. research assistantships in data science

The Computational Open Data Exploration and Design (CODED) lab in the Department of Information Science at Drexel University’s College of Computing and Informatics (CCI) is looking for Ph.D. students to fill two Research Assistantships.

The CODED lab’s research mission in data science focuses on social information processing, with the perspective that systems that facilitate and organize the processes of collective communication and knowledge development can be designed for both group and individual utility, with open and accessible data that is curated with foresight for its analytic potential. Successful candidates may come from a number of technical backgrounds (including informatics, mathematics, physics, computer science, and engineering); will pursue a data science-focused Ph.D. at CCI under the advisement of Dr. Jake Ryland Williams; will develop a mixture of data-centered technical skills in programming, analysis, design, and curation; and will gain experience in the development of data-intensive systems.

For more information about the positions, research projects, and opportunities for study, please send all inquiries via email to Jake.Williams@drexel.edu.
