I. Department of Chemistry Graduate Program Overview

A. Welcome

On behalf of the Chemistry Department at Drexel University, I extend to you a warm welcome. From our beginning as a part of the Chemistry and Chemical Engineering Department of Drexel Institute of Technology (which became Drexel University in 1971), we have evolved into a separate department in the College of Arts & Sciences awarding both Masters and Doctoral degrees (the first Ph.D. in 1968) in all major areas of chemistry.

At Drexel we have strong nationally and internationally recognized programs in the areas of analytical, atmospheric, inorganic, organic, physical, and polymer chemistry. In addition, Drexel encourages interdisciplinary activities. Several of our faculty actively collaborate with scientists in areas such as computational science, biological chemistry, and materials science.

Two of our department's most important goals are to increase basic chemical knowledge and its application to fundamental basic research. At the same time, we want graduate students to appreciate practical applications of chemistry in solving the problems that we all face in the modern world. Our department is small enough to provide each student with individual attention while maintaining a community of scholars (faculty, postdoctoral associates, graduate and undergraduate students). The relatively small research groups enable close interaction between students and their Research Advisors. We regard such attention and interaction as important positive features of our program.

Within our department, students and faculty are investigating diverse and exciting research problems (http://drexel.edu/chemistry/). The wide range of faculty interests ensures that we can stimulate the interest of students.

This handbook contains some important information with respect to your graduate career, please read it carefully and review the information, if necessary, with your Faculty Advisor. Of particular help is the checklist at the end of the handbook (Appendix B).

You should also download from the chemistry website the department and university forms (http://www.drexel.edu/provost/graduatesudies/forms.html) that are pertinent to the graduate degree(s) you wish to pursue. Departmental forms C2-C3a and C5 are also included at the back of this handbook.

Good luck and best wishes for your future in chemistry!

Reinhard Schweitzer-Stenner
Interim Head of Department
B. Advanced Degree Programs in Chemistry

The Chemistry Department offers Master of Science (M.S.) and Doctor of Philosophy (Ph.D.) degrees in Chemistry with specialization in the areas of:

Analytical
Atmospheric
Chemical Education
Inorganic
Materials
Organic
Physical
Polymer

Several of the above areas have a biological component, e.g., bioanalytical, bioinorganic, bioorganic, and biophysical. While students are free to conduct research in any of the above areas, the cumulative qualifying examinations are limited to the following areas: analytical, biological, chemical education, inorganic, organic, physical, and polymer. Consult the Graduate Advisor or the GCC if you have questions or requests about the cumulative exam subjects.

The M.S. degree is awarded to students who show competency at the advanced level in the major areas of chemistry. Both a thesis and non-thesis M.S. option is available. Most full-time students complete the M.S. degree within two academic years.

The Ph.D. degree is different from coursework-driven B.S. and M.S. degrees, in that it is self-driven, creative in nature and essentially research-based. The Ph.D. degree is conferred in recognition of breadth of scholarship and scientific attainment plus demonstrated ability to investigate significant scientific problems independently and with insight. It is not earned through completion of courses, by accumulation of credits, or by the time spent in residency, which are secondary requirements. The role of the Research Advisor is to offer guidance and advice to the student, but it’s ultimately the responsibility of the student to prosecute the research, develop original contributions to it, and obtain original results of significance suitable for presentation in a Ph.D. thesis, itself written with an appropriately high degree of literary skill. A typical time for the completion of a Ph.D. by a full-time student is 5 years after completing the baccalaureate degree.

C. Admissions Requirements

1. Graduate School requirements

Refer to the section dealing with Admission to Graduate School in the Drexel University Graduate Catalog (http://www.drexel.edu/em/grad/coas/default.html) and the attendant “Chemistry Factsheet” on the same web page. These discuss the recommended grade point average for undergraduate preparation, admission as a probationary non-matriculated
student or as a non-degree student, and demonstration of competence in English for students whose native language is not English. The term “graduate” in this handbook conveys the same meaning as “post-graduate” does in some other countries.

2. Departmental Requirements

Both full-time and part-time students are required to have a B.S. in chemistry or the equivalent. In other words, there must be evidence of adequate undergraduate preparation in chemistry, physics, and mathematics. Undergraduate chemistry coursework would typically include 34 semester (or 51 quarter) credits divided among general and inorganic chemistry (8-10 semester credits), analytical (6-8 semester credits), organic (6-8 semester credits), physical (6-8 semester credits) and unspecified chemistry electives (0-8). One to two semesters of college physics is also expected, along with differential and integral calculus. If some of the requirements are not met, you may still be admitted but required to make up any significant deficiencies as determined by the Department.

For admission, it is strongly recommended that you take and report to the department results of the Graduate Record Examination (GRE) administered by Educational Testing Services, Inc. (Princeton, NJ). GRE scores are helpful to the department and Office of Admissions, and are required if you are requesting financial support, i.e., a teaching assistantship (TA) and/or you want to be considered for a Dean’s Fellowship or a Provost’s Fellowship (see section IV. Graduate Support).

D. Advanced Status

a) Post-Masters status

Students who have previously obtained an M.S. degree in chemistry may be eligible for post-M.S. status in Drexel’s graduate program. Given that the graduate course sequence in your major area (analytical, inorganic, organic, physical, and polymer) is usually helpful in preparing for the cumulative exams (cumes), students may prefer to apply for transfer credits from prior graduate coursework rather than post-M.S. status, since the transferring of credits does not accelerate Ph.D. Candidacy requirements.

b) Transfer Credit

Up to 15 credits of graduate coursework at another university may be transferred for graduate credit at Drexel, in accord with the description in the "Transfer Credit" section in the University’s Graduate Catalog, (online at http://www.drexel.edu/provost/graduatestudies/policies.asp#transfercredit) and with the approval of the Graduate Advisor and the Graduate Curriculum Committee. Credit transfer is initiated by consulting with the departmental Graduate Advisor or with the Graduate Curriculum Committee Chairman, who will normally be prepared to consider such requests only after you have progressed through your third quarter of study in good academic standing. The granting of transfer credit usually necessitates some evaluation of the content of the prior coursework, and the results of your registration exams are also taken into consideration in this regard. Naturally, any course that is counted toward a post-M.S. admission status cannot also be transferred in for the additional credits required for a Drexel degree.
II. Advanced Degree Requirements

A. All Graduate Students

A section of the Drexel University Graduate Catalog entitled "Graduate Regulations" contains a number of general requirements of Drexel's Graduate Studies for any M.S. and Ph.D. candidate (online at http://www.drexel.edu/provost/graduatestudies/policies.asp). These are in such areas as maximum study and workload for teaching or research assistants, registration, plan of study, transfer credit, time limitations, and graduate degree requirements such as residency of at least one academic year. In addition to those requirements listed below, your Research Advisor may make additional requirements in the best interests of the student. The University requires all graduate students to maintain a cumulative GPA of at least 3.0 (B average).

1. Registration Exams

All graduate students, upon entering the program, are required to take a series of two hour written exams in analytical, inorganic, organic, and physical chemistry. The purpose of these exams is to help assess a student's preparation in chemistry to provide a basis for advice on which courses to take. You will be required to make up any deficiency revealed by these exams. If you obtain a score lower than the 25\textsuperscript{th} percentile (statistics provided by the American Chemical Society), you will be required to take an additional core course in that area. Similarly, scoring at or above the 67\textsuperscript{th} percentile will exempt you from the single core course requirement in that area. Exams are given in the week preceding the start of the fall term. If you enter the program during other terms, you will be required to begin taking the registration exams on the first Saturday of the month following your entrance/admission to the program. If, after eight offered dates, you have not taken all four exams, you will then be required to do the complete graduate sequence (3 courses) in the unexamined area(s).

Non-matriculated students planning to take only one or a few courses for credit in a particular area will generally be required to take the registration exam in that area. For these and all other exams, active cell phones are not permitted in the exam room.

2. Course Requirements

Although specific credit hour totals for advanced degrees are given in subsequent sections, some general requirements for all chemistry students include:

- At least 30 credit hours of graduate study must be done at Drexel.
- At least one complete sequence in the student's major area of interest (or other area chosen in consultation with your Research Advisor) must be taken from

  CHEM522/523/(771 or 772*) (inorganic core sequence)
  CHEM530/531/755 (analytical core sequence)
  CHEM541/542/543 (organic core sequence)
  CHEM561/562/563 (polymer core sequence)
CHEM557/558/(554, 555, or 752) (physical core sequence)

*or other inorganic course (eg. 774) with Graduate Advisor permission

- At least one course from each of the following areas: analytical, inorganic, organic, physical, and polymer chemistry. (unless exempted by a registration exam score at or above the 67th percentile)
- The minimum enrollment for Ph.D. Candidates (see II.D.3) is one credit per term.

In the event that a required course is not offered for a protracted period of time due to low enrollment, the Graduate Advisor may make special allowances.

3. **Plan of Study**

At the point of choosing your Research Advisor you should file a Plan of Study in consultation with the Graduate Advisor and your Research Advisor. A Plan of Study form (Form D-1) is available from the Office of Graduate Studies at [http://www.drexel.edu/provost/graduatestudies/forms.html](http://www.drexel.edu/provost/graduatestudies/forms.html) (see Forms menu). You should list courses (i) already taken, (ii) courses to be taken, and also (iii) provide tentative dates for your oral candidacy exam and Ph.D. defense. The Plan of Study must then be approved by the Graduate Advisor, the Department Head, and the Graduate Studies Office. Changes in the Plan of Study after submission must have the approval of the GCC.

4. **Annual Progress Report**

All full-time and part-time research students are required to submit an annual progress report detailing their advancement in research for the preceding year. During the 2nd year of study the format will be written, in the 3rd year and beyond the format will be oral.

**Written Progress Reports** (for 2nd year students) - This two-page report should briefly describe what research was accomplished and how it fits in to your long-range research goals. You may include references for papers published and presentations given (either talks or posters at local or national meetings). If more than one author is listed, you should carefully explain what portion of the work is your own. Your Research Advisor is required to acknowledge and comment on this report. The Graduate Curriculum Committee (GCC) will monitor your research progress using these reports: If your report is deemed inadequate, the GCC will specify the inadequacies and recommend the corrective action you must take to make this and/or future reports satisfactory. If your research progress is deemed inadequate, the GCC will recommend either corrective action that you must take or your dismissal from the graduate program, depending on the circumstances (history of research progress, etc.). Written feedback from both the Research Advisor and the GCC is normally provided by one or more GCC members. Failure to submit a report by the posted deadline may necessitate an oral presentation of the progress report to the full GCC.
Oral Annual Report Progress Meetings (OARPM) (for 3rd year and older students) – These are annual meetings in year 3 and beyond (e.g., year 3, 4, 5, for a 5 year PhD or year 3, 4, 5, 6, 7 for a 7 year PhD). Annual meetings are due at or before (up to 2 months prior) the anniversary of your thesis proposal done typically during the 2nd year of PhD study (though if the thesis proposal is done early, e.g., in the summer after 1st year if a student elects to do so, then the OARPM will occur in the fall term of the 3rd year). Subsequent meetings will occur at or prior to the one year anniversary of prior meetings. Oral presentation/questioning will occur at a private meeting of a small committee knowledgeable in the student’s subfield. This committee should contain at least 3 members, chosen from the student’s thesis advisory committee. The 3 members chosen should be those most knowledgeable in student’s field. This can include the external member if desired. The written component will be the same form as 2nd year progress evaluation. The oral presentation should be 30-60 minutes followed by questioning. The results can be pass, fail or conditional pass with a subsequent meeting required no later than 3 months after the first meeting. This is meant to be constructive, to prepare you for thesis defense, an early warning system to those not making sufficient progress.

5. Academic Honesty

All students are expected to maintain the highest professional and academic ethics in all of their efforts, whether these efforts involve research or coursework assignments. It is expected that Chemistry graduate students (and faculty) will follow the American Chemical Society’s Academic Professional Guidelines, in the forms of (http://portal.acs.org:80/portal/fileFetch/C/CTP_005937/pdf/CTP_005937.pdf), the “Academic Employment Guidelines for Graduate Students and Postdoctoral Associates” (currently at http://portal.acs.org/portal/acs/corg/content?_nfpb=true&_pageLabel=PP_ARTICLEMAIN&node_id=1134&use_sec=false) & “The Chemical Professional’s Code of Conduct” (currently at http://portal.acs.org/portal/acs/corg/content?_nfpb=true&_pageLabel=PP_ARTICLEMAIN&node_id=1095&content_id=CNBP_023290&use_sec=true&sec_url_var=region1&__uuid=f9f83c43-e617-4e09-8a2e-531aaf4b6d9a) The University’s information about its policies is at http://www.drexel.edu/provost/policies/academic_dishonesty.asp Of note, is the sometimes-hazy distinction between fair quotation and plagiarism. In general, when one uses the actual wording of a source, it must be placed between quotation marks. Students are expected to abide by the guidelines at: http://www.library.drexel.edu/resources/tutorials/plagiarism/plagiarism.html and can find additional details at the “Citing Sources and Avoiding Plagiarism” link to the Duke University guide at http://www.library.drexel.edu/resources/tutorials/citations.html

During 2007-2008, the Associate Vice-Provost for Graduate Affairs put in place a procedure through which a student may appeal a decision made by the student’s department. The final arbiter in this appeal process will be the Provost. In any case, the chain of responsibility for such matters is: Graduate Advisor & Grad. Curriculum Committee —> Head of Dept. —> CoAS Associate Dean for Graduate Affairs —> Dean of College of Arts & Sciences —> Associate Vice-Provost for Graduate Affairs —> Vice-Provost for Academic Affairs —> Provost.
6. Departmental Seminar

All full-time Ph.D. students past their first year of study must enroll in CHEM 865, Chemistry Research Seminar, at least once per year. The outside speakers that we bring in provide you with an opportunity to obtain a broader perspective of research activities in your own and other fields of chemistry. **ALL FULL-TIME STUDENTS ARE ENCOURAGED TO ATTEND ALL DEPARTMENTAL SEMINARS** unless it conflicts with a regularly scheduled teaching assignment.

First-year, full-time students (both M.S. and Ph.D.) must attend 9 seminars per academic year (AY), and first-year, part-time students must attend 6 seminars per AY. However, when a full-time PhD student is enrolled in Chem 865 for one term during a given AY (currently a requirement for full-time students past their first year), then the attendance requirements outside of those required for Chem 865 is 6 additional seminars per AY. For part-time students, the seminar attendance requirement is 6 seminars per AY and enrollment in Chem 865 is not required. Non-thesis M.S. students should never register for Chem 865 more than once because additional enrollments will not be counted toward the 45 credits needed for the degree. Students are required to include their seminar attendance in their annual progress reports for 2009-2010 and thereafter; **lack of sufficient attendance without a valid explanation will result in a less than satisfactory annual evaluation.** Attending the chemistry minisymposia that are usually scheduled in the first 2-3 weeks of the fall term does not count towards the required number of seminars, but all students that have not yet joined a group should attend the minisymposia to learn about faculty research in the department.

7. Thesis

All full-time students who have received financial assistance from the department are required to write a thesis on original chemical research for their terminal degree (see the appropriate degree requirements below for more information).

As of June 30, 2005, the process for thesis submission is as follows:

1. Format your thesis according to the standards in the Thesis Review Manual that can be saved and/or printed from [http://www.library.drexel.edu/services/thesis/thesismanual.pdf](http://www.library.drexel.edu/services/thesis/thesismanual.pdf). This manual includes directions and examples for referencing the primary scientific literature (i.e., peer-reviewed, scientific journal articles—a preferred source of information for your thesis), but does not provide examples for referencing either the secondary literature (books, monographs, edited books, handbooks, etc.) or information obtained from the internet (much less desirable except for peer-reviewed, on-line journals). Examples for referencing the secondary literature may be found in the instructions for authors of various peer-reviewed journals in your discipline (such as those published by the American Chemical Society); in addition to the book title, author/editor, and page numbers, it is generally a good idea to specify the chapter title and author when applicable. Finally, the reference librarian for science at Drexel recommends the following guidelines for citing URL’s:

   [http://writing.colostate.edu/guides/researchsources/documentation/apa/internet.cfm](http://writing.colostate.edu/guides/researchsources/documentation/apa/internet.cfm)

2. Submit the final copy of your thesis to your supervising professor for final review and approval. The supervising professor and department head will acknowledge their approval of your final thesis by signing the Completion form.
3. Submit your thesis to the library in both hard and electronic copy. The archivist and library representative will sign the appropriate lines on the Completion form once library standards have been met. You can view library requirements at http://www.library.drexel.edu/services/thesisbinding.html.

4. Submit the Completion form to the Office of Graduate Studies for final degree clearance.

8. Time limit for the M.S. and/or Ph.D. degree

As described on the website for the Office of Graduate Studies (http://www.drexel.edu/provost/graduatestudies/policies.asp#programcompletion), the policy on time limits for a graduate degree is as follows: “[All] students who enter graduate study at the post-master's or post-baccalaureate level must complete their studies for their graduate degree(s) within seven years after initial graduate registration. Those who receive a Master's degree from Drexel University and then transfer to a doctoral program are permitted five years after registration at the doctoral level to complete the Ph.D. degree.

In unusual circumstances, a student who finds that these time requirements are inadequate due to special circumstances must discuss this with his or her advisors. Together they may request an extension before the end of a student's stated time limit (either seven or five years). A student requesting an extension should work with his or her advisors to develop a plan of study and a time line for completion that is reasonable for the student. All formal extension requests must give a reasonable time for completion with an accompanying revised plan of study. Should an extension be required, please be aware that all courses will be reviewed for timeliness; some earlier coursework may have to be repeated.

Extension requests for master's students must be forwarded after approval by the supervising professor (if on a research track) to the department’s Graduate Advisor, who will make the final decision. Extension requests for doctoral students must be forwarded, after approval by the supervising professor and the department’s Graduate Advisor, to the Office of Graduate Studies, which will make the final decision.”

B. Master of Science Degree

1. Course Requirements

The M.S. degree is awarded after satisfactory completion of a minimum of 45 credit hours in chemistry and related fields. Several general requirements are listed above in Section IIA2. The remaining credits may be chosen from approved graduate courses within the department or from other departments offering courses related to your major area. These courses should be approved in advance by your Research Advisor or the departmental Graduate Advisor.

2. Thesis Option

The chemistry faculty strongly recommends the masters thesis option, but realize it is not always possible or necessary for all part-time graduate students. M.S. candidates who receive
financial aid in the form of a teaching assistantship or tuition fellowship are required to enroll in CHEM 898 (M.S. Thesis) and submit a M.S. research thesis or equivalent report. Within this option, Drexel's rule is that up to nine credits of coursework may be replaced by CHEM 898 (master’s thesis), note that research credits (CHEM 997) are not limited so long as the student completes all course requirements described above. During the first quarter of coursework a student should choose a Research Advisor with whom to collaborate in carrying out an original investigation in chemistry. The results will be written up in thesis form and submitted to a M.S. Thesis Review Committee consisting of the Research Advisor and two other departmental faculty suggested by the Research Advisor and approved by the Graduate Curriculum Committee (See the C-5 form at the back of this Handbook). The acceptance by this committee of the M.S. thesis completes the thesis option requirements for the M.S. degree. Both the Thesis Review Manual, which describes the preparation and required format of the thesis, and the library binding requirements are available online as described in section II.B.2. Note also Office of Graduate Studies requirements: if you take a Drexel M.S. degree (3.0 GPA required), you need to apply for readmission to the graduate program (i.e., as a Ph.D. Applicant), and for this, a cumulative grade point average of 3.50 is required.

3. Research Credits for Non-Thesis M.S.

You may count up to nine credits of CHEM 997 towards a terminal non-thesis M.S. degree. However, you must submit a written report on the work that satisfies your Research Advisor. Students continuing without break toward the Ph.D. degree may count up to 9 credits of thesis and/or research toward the M.S. degree, as long as they have at the point of graduation with their M.S. successfully passed their cumulative exams; three credits may be counted, if cumes have been commenced and at least two passed. Note that the requirements are different for students in the B.S./M.S. program; consult the Graduate Advisor or Head of Department.

C. Doctor of Philosophy Degree

This degree is awarded in chemistry and earned in one of the areas of chemistry specified in section IB. The degree recipient must demonstrate scholastic breadth in chemistry as well as contribute significantly to scientific advancement in a chosen major area. Requirements of the program include general coursework; a thesis proposal; a candidacy exam procedure; a course on searching the chemical literature or technical writing (if the latter is approved by the Research Advisor) (see II.D.5); and successful publication of a Ph.D. thesis (dissertation).

1. Course Requirements

Drexel University requires that 90 credits of graduate level work must be completed for the Ph.D. degree. Excluding research credits, the Chemistry Department requires a minimum of 30 credits of coursework in chemistry, which can include the fulfillment of the core course requirements outlined in Section II.A.2. The remaining coursework will consist of more advanced graduate chemistry electives and special topics courses that are mutually agreed upon by the student and the Research Advisor; ideally, these courses should be specified when a Plan of Study (D-1 form) is submitted. Note that the Chemistry Department requires students to maintain a cumulative GPA of at least 3.0 in lecture courses offered by the department or the
Graduate Curriculum Committee (GCC) may recommend that the student not move forward to Candidacy.

Transfer of core course or elective credits from other institutions is possible, under conditions similar to those for the M.S. degree.

The minimum requirement of 30 Drexel graduate-level chemistry course credits may often be exceeded, depending on the number of core courses needed (as determined by the registration exams, see section II.A.2), the number of electives in the Plan of Study, or pre-Candidacy registration requirements.

As of 2007-2008, the Graduate Office will not normally permit a Ph.D. student to take coursework toward an additional degree (e.g., M.B.A.). However, individual courses of interest, or of relevance to your Ph.D. may indeed be permitted. You should use a Drop/Add form for this purpose, obtaining first the approval of your Research Advisor, and then of the Graduate Advisor, who will inform the Graduate Office of this.

2. Thesis Proposal Seminar

All Ph.D. students are required to give a 30-50 minute Thesis Proposal Seminar presentation related to the student's research. The seminar should be accompanied by a research report; content and format is described below. The purpose of the Thesis Proposal is to promote a greater fundamental understanding about the student's own specific research project. This will also provide context and perspective about previous accomplishments in the field by other research groups as well as her/his own. This will help the student become more knowledgeable about her/his research project by (i) promoting a greater fundamental understanding about the student's own specific research project and (ii) providing context and perspective about previous accomplishments in the field by other research groups as well as her/his own. The Research Advisor is expected to provide considerable input to the student about the breadth and depth of the literature review, the essential papers to read (and comprehend), the historical and current topics to include and/or emphasize in the seminar, and of course the details of the research project. Three results are possible: pass, fail, or conditional pass with additional work required or further examination at a later date. The outcome of the Thesis Proposal Seminar will be adjudicated by a Thesis Proposal Committee comprised of 5-6 faculty whose composition is further specified below and must be approved by the Graduate Advisor in advance. The student’s Research Advisor is not allowed to serve on the Committee, but may be present during any confidential questioning and/or deliberation by the Committee following the student's presentation and answering of questions from the general audience.

Content of both thesis proposal seminar and paper:

- MUST include a review of the ESSENTIAL LITERATURE (30-50% of seminar and paper)
- Students must distinguish which papers are ESSENTIAL vs. non-essential background (do not include everything that is vaguely relevant)
- MUST identify the gap in the knowledge base (or an interesting question or a new application) that your research aims to address in the future, and discuss the initial steps towards addressing this gap. Explain the significance thereof. (20-50% of seminar and paper)
• MUST describe their research progress thus far (even if preliminary) (10-30% of seminar and paper)

Style of the paper and the talk:
• Style of paper should be similar to a research grant proposal or a targeted review article, but content should be as described above.
• References should be in proper and consistent format, see notes above about avoiding plagiarism and citation of sources. In your talk, references on each slide are preferable, so the audience knows which reference goes with which idea.

The Thesis Proposal shall include a written report submitted to the committee two weeks in advance of the seminar. The report shall be no more than 10 pages in length including the text, reaction schemes, figures, tables, and references. The format for the body of the text is as follows: 1-inch margins, single-spaced, with a 10-, 11-, or 12-point font such as Arial, Helvetica, Times, or Times New Roman. The content is described above, and the student should also seek input from her/his Research Advisor throughout the writing process.

Full-time Ph.D. students are required to complete the Thesis Proposal requirement by the end of the winter term of their second year or, if they did not start in the fall term, at the end of their 6th term (including summers) in the graduate program. Part-time Ph.D. students are required to complete the Thesis Proposal requirement by the end of the spring term of their second year or, if they did not start in the fall term, at the end of their 7th term (including summers) in the graduate program. This is a firm deadline for both full- and part-time Ph.D. students, i.e., there are no extensions. Note that to facilitate coordination with chemistry seminars by external speakers, the Thesis Proposal must be scheduled at least 3 weeks in advance (preferably more) via a C-3 form submitted to the Graduate Advisor, meaning that the C-3 form must be submitted by the end week 6 of the term in which the Thesis Proposal is due.

Students who do not meet the above deadline will be required to present both the first Thesis Proposal Seminar and a second literature seminar within 3 months of the original deadline for the first Thesis Proposal Seminar, with the second seminar in an area outside the area(s) of the research group in which the student resides. Students who fail to meet the deadline for the second (penalty) literature seminar will be dismissed from the graduate program.

The Thesis Proposal Seminar Committee members will ask questions specific to the research seminar, as well as general questions related to the candidate's intellectual preparedness for the remaining graduate program experience. The questioning of the student by the committee will last up to two hours, depending on the preparation of the student. Following the committee's questioning, the student will be excused and the committee will reach a decision, which will then be conveyed immediately by the Chairperson to the student. A satisfactory outcome enables the student to continue toward the Ph.D. degree (begin taking or continue taking cumulative exams, etc.).

In the event that a student's Thesis Proposal Seminar is not completely satisfactory, the Committee may require supplementary written material and a short additional presentation or a second full-length Thesis Proposal Seminar, whichever is more appropriate as determined by the Thesis Proposal Seminar Committee in consultation with her/his Research Advisor. Any additional requirements must be completed within one month of the original seminar. The
Committee Chairperson (Chair) will notify the student of the final outcome in two weeks or less via a departmental C-3a form.

The Ph.D. student presenting the seminar, in consultation with his/her Research Advisor, selects the Chair and members of the Thesis Proposal Seminar Committee, in accordance with the university’s general rules for the selection of doctoral student committees:

- The Ph.D. student’s Research Advisor may not be a member of the Committee, and may contribute to the proceedings only if permitted by the Chair.
- The Committee must include one member from outside the Department, who may be from another university, and must be a tenured or tenure-track faculty member from an appropriate discipline in a Ph.D.-granting institution. The external member should be an expert in the field of the student’s research.
- All members of the committee should be research active. Research active is someone who has published in the primary literature within the last 3 years, or is currently advising graduate students. Ideally a majority (3 out of 5 committee members) should publish in the field of the student’s research. In the case that sufficient expertise is not present in the department, a suitable solution is the use of 2 external members that are experts in the field of the student’s research. Personality conflict is generally not a valid reason for excluding a faculty member in our department from your committee, when that faculty member is an expert in your field of research.
- The Committee must include at least one member of the departmental Graduate Curriculum Committee (GCC).
- One voting member of the examining Committee who is of emeritus/retired status from Drexel (as an “internal” member) or another chemistry graduate program is permissible.
- Note that although a total of five committee members is required by Drexel, a sixth is strongly recommended in case of some unavoidable absence. Additional members not fulfilling the above requirements may serve, but have no vote.
- The Graduate Advisor has been asked by the faculty to make sure all committees are in line with the above rules. In some ambiguous cases, the Graduate Advisor will consult with the Chair of the GCC prior to making a decision. The Graduate Advisor can refuse to sign if your committee does not meet the above criteria, keeping in mind that committee members that are experts in the field of the student’s research should be used unless such experts do not exist in the region.
- Ideally, you should use the same committee for all Drexel PhD hurdles (or a subset of this committee for OARPMs)

Further details worth noting regarding the Thesis Proposal Seminar are:
- A departmental C-3 form is required for the scheduling of the Thesis Proposal Seminar and the appointment of the committee members. The Thesis Proposal Seminar must be scheduled at least 3 weeks in advance (preferably more) for coordination with chemistry seminars by external speakers.
- You may be required to use a sign-up sheet, to ensure that student seminars are spaced out evenly throughout the term, and that seminars do not occur during finals week.
- The Research Advisor will advise the student on the suitability of her/his Thesis Proposal Seminar (breadth and depth of the literature search, the essential papers to read, the
historical and current topics to include and/or emphasize, etc.), as well as the title and abstract that must be distributed at least 1 week in advance to the Chemistry Department for announcement/publicity purposes.

- The Seminar Presenter must ensure that all the members of her/his Thesis Proposal Seminar Committee know in advance the date, location and time of the Seminar.
- The title, abstract, date, time and location of the Thesis Proposal Seminar must be advertised in writing in the Department and on the departmental web site at least a week in advance.

3. Ph.D. Candidacy

The University considers students “Ph.D. Applicants” until they have passed into Ph.D. Candidacy status. In order to formally become a “Ph.D. Candidate” in Chemistry, as of Winter 2007, you must (a) have passed at least three cumulative exams, and (b) have completed 45 credits of graduate work (or 15 credits at Drexel, if you entered with “post-Masters’s” status). A set of University D-4/4a forms is submitted at this stage; you should fill out your relevant information on the D-4 and submit it to the Graduate Advisor (along with a copy of your M.S. transcript if you entered post-M.S.).

a) Written (Cumulative) Exams

Written exams designed to evaluate your chemical knowledge (normally in your major area of interest) are given monthly during the academic year and occasionally during the summer at the discretion of the faculty. They are normally held on the first Saturday of each month, in Disqué-307 at 10:00 am; the exact dates and times are posted on the Departmental website.

All Ph.D. students must begin taking cumulative exams no later than the beginning of their second year in the program. Cumulative exams must be taken sequentially, with one unexcused absence allowed, until five are passed or six are failed. Six failures are a basis for dismissal from the Ph.D. program. The Department requires that you be registered for at least one course during the term in which you take your first cume.

First year cume option: Prior to the beginning of her/his second year in the program, a Ph.D. student can take her/his first cumulative exam at her/his option, i.e., on the topic of her/his choosing* with no requirement to take a second cumulative exam in the first year. A first-year student may also elect to take a second cumulative exam at her/his option, i.e., on the topic of her/his choice*, but thereafter must begin taking cumulative exam once a month without interruption except for the summer period when no cumes are offered (August, September, and possibly July depending on the subdiscipline (analytical, inorganic, etc.).

*from among the topics announced by the faculty members who are writing cumulative exam that month

The topic(s) of the cumulative exams may, or may not, be announced prior to the exam, depending on the sub-discipline. It is your responsibility to make sure that the appropriate faculty member(s) is/are aware of the need to provide a cumulative exam for you to take in any given month. This is particularly so if you are taking an exam outside the chemistry subdiscipline specified on your C-2 form. At least three of the five passes must be in the student’s selected area of specialization; it is therefore important that your area of specialization be chosen carefully in consultation with your Research Advisor.
4. Thesis Advisory Committee

Following the completion of the cumulative exams, the Ph.D. Candidate must select, in consultation with her/his Research Advisor, a Thesis Advisory Committee (Form D-5). The Thesis Advisory Committee is normally composed similarly to (and is often the same as) the Ph.D. Final Oral Defense Committee. Regulations for the selection of both committees are the same (see section D.6 below), except that outside member of the Thesis Advisory Committee need only be an appropriate faculty member outside the department, whereas the outside member of the Ph.D. Final Oral Defense Committee must be an appropriate faculty member outside the university. However, because it is desirable to have the same faculty on both the advisory and final defense committees, the Office of Graduate Studies recommends that the Committee include an appropriate member from another institution.

5. Communication Requirement

The communication or language requirement may be satisfied by completing a graduate course in Chemical Information Retrieval (CHEM 767) or Technical Writing (e.g., COM 510) if the latter is approved by the Research Advisor.

6. Ph.D. Thesis

A Ph.D. thesis, the heart of the Ph.D. degree, must be written and correctly formatted by the student, accepted by the Research Advisor, presented to the Ph.D. Final Oral Defense Committee (Form D-6), and defended orally. A copy of the Thesis Style Manual may be downloaded from the Hagerty Library website, [http://www.library.drexel.edu/servicesdocs/thesis/thesismanual.pdf](http://www.library.drexel.edu/servicesdocs/thesis/thesismanual.pdf). According to university requirements (Form D-6), the presentation and oral defense must be scheduled “at least four (4) weeks prior to the final defense.”

Members of the student's Ph.D. Final Oral Defense Committee should be selected in mutual consultation with the student's Research Advisor as the student nears completion of her/his dissertation, but no later than four (4) weeks prior to her/his final defense (Form D-6).

The Committee is normally composed similarly to (and is often the same as) the Ph.D. Thesis Advisory Committee. The Ph.D. Candidate's Research Advisor, the Graduate Advisor, and the Graduate Studies Office must approve the composition of the Ph.D. Final Oral Defense Committee. Other specific rules governing the composition of the committee are as follows:

- The candidate’s Research Advisor may not be a member of the Committee, and may contribute to the proceedings only if permitted by the Chair.
- The Committee must include one member from outside the University, who must be a tenured or tenure-track faculty member from a Ph.D. granting institution and from an appropriate discipline. The external member should be an expert in the field of the student’s research.
• All members of the committee should be research active. Research active is someone who has published in the primary literature within the last 3 years, or is currently advising graduate students. Ideally a majority (3 out of 5 committee members) should publish in the field of the student’s research. In the case that sufficient expertise is not present in the department, a suitable solution is the use of 2 external members that are experts in the field of the student’s research. Personality conflict is generally not a valid reason for excluding a faculty member in our department from your committee, when that faculty member is an expert in your field of research.

• The Committee must include at least one member of the departmental Graduate Curriculum Committee (GCC).

• One voting member of the Committee who is of emeritus/retired status from Drexel or another chemistry graduate program is permissible.

• Note that a total of five committee members is required by Drexel – a sixth is strongly recommended in case of some unavoidable absence. Additional members not fulfilling the above requirements may serve, but have no vote.

• The Graduate Advisor has been asked by the faculty to make sure all committees are in line with the above rules. In some ambiguous cases, the Graduate Advisor will consult with the Chair of the GCC prior to making a decision. The Graduate Advisor can refuse to sign if your committee does not meet the above criteria, keeping in mind that committee members that are experts in the field of the student’s research should be used unless such experts do not exist in the region.

It is the responsibility of the student, not his/her Research Advisor, to submit an acceptable Ph.D. thesis. However, the final defense is not to be scheduled until (i) the Research Advisor and the Graduate Advisor have approved the thesis, as indicated by their signatures on Graduate Studies Form D-6 (Final Oral Exam); and (ii) the student has published at least one peer-reviewed article in a scientific journal that is part of her/his PhD research (see section II.C.7).

One or more members of the examining committee will often be willing to read and comment on at least one draft of the thesis before presentation of the finished version to the committee for the defense. However, a copy of the finished thesis must be received by each member of the examining committee no later than two weeks prior to the final defense. The date, time, location and title of the final defense must be announced publicly in writing and on the departmental web site at least one week prior to the date of the oral presentation. Inclusion of a brief abstract with the announcement is encouraged. When scheduling your final defense, once you have confirmed that every member of your committee is available on the proposed day and time of your defense, you should then ask the department secretary to reserve a suitable room.

The final defense of the Ph.D. thesis consists of two parts:
• A public 40-60 minute seminar on the thesis research followed by general questions from the audience with the committee in attendance.
• A private (candidate plus committee) question/answer session (Final Oral Exam), convening shortly after the public seminar.
7. Publication requirement

The publication of scientific articles in discipline-appropriate, peer-reviewed journals is the primary method for disseminating research results to the broader scientific community. Given that the dissemination of such results is essential for the advancement of science as well as an essential skill for the individual scientist, every Ph.D. Candidate must submit to the Graduate Advisor, at least four (4) weeks in advance of the Final Defense, evidence of at least one (1) peer-reviewed publication in a scientific journal that is part of her/his PhD research and on which s/he is a principal author, i.e., on which s/he contributed the majority of the experimental and/or theoretical results. Acceptable evidence is either (i) an electronic copy (pdf) of the published article or the galley proofs or (ii) a letter (or email) from the journal editor confirming that the article has been accepted. Importantly, the submission of a manuscript for publication in a peer-reviewed journal without its subsequent acceptance does not fulfill the publication requirement. In cases where the fulfillment of the requirement is ambiguous for whatever reason, the issue will be adjudicated by the Graduate Curriculum Committee (GCC).

III. Graduate Advising

Students who have selected a Research Advisor should consult that person for information and advice on the graduate program in chemistry. For more general or procedural information, full-time students should consult with the departmental Graduate Advisor, while part-time students should confer with either the departmental Graduate Advisor or the Chair of the Graduate Curriculum Committee.

Appeal Procedure.

In the case of some irresolvable disagreement between the student and the Research Advisor, the student should consult with the Graduate Advisor and the Head of Department. The next four levels of appeal are (i) the Associate Dean for Graduate Studies in the College of Arts & Sciences (CoAS), (ii) the Dean of CoAS, (iii) the Vice-Provost for Graduate Studies, and (iv) the Provost of the University, the latter being the final arbiter. Please check the Graduate Studies’ and/or Provost’s website(s) for a formal appeals procedure.

IV. Graduate Support

Financial aid is typically available in the form of a teaching assistantship (TA), research assistantship (RA), and/or tuition remission. Exceptional applicants will also be nominated for a supplemental Dean’s Fellowship ($3,000/year) or Provost’s Fellowship ($5,000/year). Teaching assistantships and tuition remission are available from the department on a competitive basis and are therefore not automatically given to every student who is admitted into our graduate program. Both incoming and resident graduate students are considered by request for a departmental TA/tuition remission. RAs are available from individual faculty members via their research grant funds. Please note that the university does not allow you to hold any other employment in addition to a full teaching or research assistantship.
New and full-time M.S. & Ph.D. students who are self-supporting (don't have a TA) and have GPA's of 3.5 or greater are eligible to apply for a one-time $3,000 Dean's Fellowship offered by the Vice-President of Enrollment Management. This Fellowship is applied as an offset against the student's tuition bill.

A. Teaching Assistantship (TA)

The current standard Teaching Assistantship (TA) is a 12-month, October-September appointment. Teaching Assistants are required to teach for three out of the four quarters (normally Fall-Winter-Spring); the possibility of not teaching during a quarter other than Summer is dependent on Departmental teaching needs. Students with TAs usually also receive tuition remission for the (substantial) costs of graduate tuition. M.S. students are not eligible for TA support at Drexel, and tuition remission is normally not awarded without an accompanying TA or RA appointment.

In return for departmental support (TA and tuition remission), the chemistry department expects each teaching assistant to carry out his or her duties conscientiously and responsibly. Failure to do so (e.g., not enforcing the eye protection or other safety requirements in lab classes) can result in the loss of the assistantship. If, because of some emergency (such as illness or getting snowed-in during winter), you are unable to attend a class, make sure that you have made a mutual "back-up" agreement with another instructor, so that one can take the other's place at short notice. The faculty generally does likewise.

The duties of a teaching assistant are somewhat similar to those of the other teaching staff in the department, generally involving the instruction and guidance of undergraduates in laboratory and recitation classes, most frequently in freshman chemistry courses (CHEM.101-CHEM.167). Each teaching assistant works in conjunction with, and under the guidance of one of the chemistry faculty, who has responsibility for the design and execution of the course sequence, and for giving the lectures in the course. When assigned to a course, you should therefore consult with the faculty member who is in charge of the course to determine what your duties will be for the coming quarter. The Associate Head of Department is responsible for constructing the teaching duty assignments.

The types of activities in which you will find yourself involved include: running labs and recitations; grading of students' lab reports, recitation quizzes and exams; and helping faculty to develop and prepare materials for labs and exams. This translates into an average of 6-8 hours per week of classroom activity (22 quarter contact hours per year), plus roughly twice that number of hours per week of related work outside the classroom.

New teaching assistants are usually assigned to one of the freshman sequences. Because these are large courses, there are often substantial numbers of recitation and/or lab instructors involved, so that it is necessary to hold informational/organizational meetings weekly; attendance at these meetings is mandatory unless the instructor in charge specifies otherwise.

B. Tuition Remission

Remission of graduate tuition is awarded only in conjunction with graduate teaching assistantships. In the first year of graduate study up to 9 credits per quarter are awarded; more senior students receive less than this, according to the needs of their Plan of Study and
departmental budget allowance. Following achievement of Ph.D. Candidacy, full-time students will be billed for and/or receive tuition remission of only 1 credit per quarter, but may register for additional credits with no additional charge.

C. Research Assistantship (RA)

A Research Assistantship (RA) may be arranged with your Research Advisor if sufficient grant funds are available; the stipend is determined by the Research Advisor. Part of the working relationship between a Research Advisor and a research student is that there must be a mutual agreement as to what tasks and responsibilities are involved in a particular RA. When you become interested in doing research work with a given faculty member, you may want to inquire about the possibility of a Research Assistantship. M.S. students are eligible for RA support at Drexel.

D. Satisfactory Progress

Continuation of any of the above forms of financial aid is contingent on satisfactory academic and research performance. Performance is evaluated annually by the Graduate Curriculum Committee and based upon the student’s academic transcript and research progress reports (latter described in section II.A.4). The department generally supports Ph.D. students (via stipend and/or tuition remission) for no more than 20 quarters of graduate work from the date in which they entered the graduate program, except in the case of a department-approved leave of absence. Support beyond the first 20 quarters is strictly at the discretion of the department and/or the Research Advisor if the latter has funds to support a graduate student. M.S. students are not eligible for teaching assistantships (section IV.A), but may receive financial aid from the university for their first 8 quarters of graduate study. M.S. students may also apply for a one-time Dean's Fellowship of $3000 (see IV. Graduate Support) if their GPA is 3.5 or higher.

E. Taxes on Fellowships

Some foreign student holders of graduate fellowships (e.g., the P.R.C., Poland) find that tax treaties between their home country and the U.S. hold advantages for them with respect to Federal income taxes, which U.S. Residents rarely escape. City of Philadelphia and Pennsylvania state income taxes on Fellowship stipends are difficult to avoid. Tuition remission is usually not taxed.
V. Course Selection

A. Core Courses

1. Analytical Chemistry

CHEM 530, Spectroscopic Methods, Fall: Introduction to optics, interaction of electromagnetic radiation with matter, design of optical instruments, survey of spectroscopic methods of analysis.

CHEM 531, Chromatographic Methods, Winter: Principles of separation, resolution theory, pressure- and voltage-driven flow, separative and dispersive transport, survey of chromatographic instrumentation (pumps, injectors, columns, detectors), survey of chromatographic separation modes and applications.

CHEM 755, Mass Spectrometry, Spring: Basic interpretive skills for organic & biochemical analysis; survey of ionization methods, ion selection or separation techniques and detection; applications in chemistry & biology.

2. Inorganic Chemistry

(CHEM 521, Inorganic I, is no longer offered, this course had content very similar to most undergraduate inorganic courses. Most students can take CHEM 522 after reviewing their inorganic notes or textbook from undergraduate training. Consult Addison or Papish if you did not take Inorganic Chem. as an undergraduate, and you would like study materials to prepare to take CHEM 522.)

CHEM 522, Inorganic Chemistry II, Fall: Molecular symmetry and group theory with applications to the bonding, magnetic and optical properties of inorganic molecules. Transition metal cations in crystal fields of various symmetries, crystal field stabilization energy. Molecular orbital construction for polyatomic and centric molecules. How structure relates to vibrational spectra for inorganic molecules.

CHEM 772, Bioinorganic Chemistry, offered every two years, consult Papish. Metal transport and storage in biological systems, structure and function of metalloenzymes, reaction mechanisms, synthetic systems for metalloenzyme modeling.

CHEM 771, Organometallic Chemistry, offered every two years, consult Papish. Structures, reactivity, mechanisms of important organometallic complexes and reactions. Applications in organic synthesis and polymer chemistry.
3. Organic Chemistry

**CHEM 541, Organic Chemistry I, Fall:** Spectroscopic methods of analysis, including mass spectrometry (MS, principles of MS, the mass spectrum, fragmentation mechanisms, special topics), Infrared (IR, principles of IR spectroscopy, the infrared spectra of functional groups), Ultraviolet Spectroscopy (UV, principles of UV, UV absorption by organic functional groups, special topics); Nuclear Magnetic Resonance (NMR, theory of NMR, Proton NMR (chemical shifts, coupling constants, structural determination using NMR, shift reagents and Chiral solvating agents), Carbon NMR (FT-NMR, chemical shifts, special topics).

**CHEM 542, Organic Chemistry II, Winter:** Static or "Classical" Stereochemistry (stereoisomerism, chirality, stereogenic and chirotopic atoms, internal stereocomparisons [homotopic and heterotopic groups and faces, prochirality, applications to NMR, asymmetric syntheses, biochemical problems such as enzyme reactions and configurational determinations], conformational analysis of cyclic and acyclic molecules. Dynamic Stereochemistry (relationships between structure, geometry and reactivity, physical methods of conformational determinations, use of stereochemistry in mechanistic studies).

**CHEM 543, Organic Chemistry III, Spring:** Mechanisms of organic reactions and the techniques of studying them: acyl and alkyl substitution, carbocations, carbanions, free radicals, carbenes, nitrenes, ylides, simple kinetics, isotopic labeling, cross-over experiments, acidity concepts, substituent effects, Hammett equation.

4. Physical Chemistry

**CHEM 557, Physical Chemistry I, Fall:** Schrödinger’s equation and particle-wave duality, atomic structure and spectra, optical spectroscopy on molecules (rotational, vibrational and electronic spectra) molecular symmetry, design of modern spectrometers, magnetic resonance spectroscopy.

**CHEM 555, Quantum Chemistry Of Molecules I, Fall:** Covers general properties of operators; Schrödinger's equation and its solutions for a particle in a box; harmonic oscillator, tunneling problems, rigid rotor, and the hydrogen atom; approximation methods; and absorption of radiation and selection rules.

**CHEM 558, Physical Chemistry II, Winter:** Covers statistical mechanics of distinguishable and indistinguishable particle systems, and thermodynamic functions for both systems and chemical equilibrium.

**CHEM 752, Biophysical Chemistry, Spring:** peptide conformation, protein structure, peptide and protein folding, heme proteins, electron transfer proteins, enzyme kinetics, biophysical techniques including EPR and NMR.
CHEM 554, Chemical Kinetics, Spring: Focuses on experimental and theoretical considerations of chemical reaction rates

5. Polymer Chemistry

CHEM 561, Polymer Chemistry I, Fall: Scope of polymer chemistry & science; structure/property relations; step (condensation), free-radical, cationic anionic, group-transfer, ring-opening polymerization; stereochemistry of polymerization; coordination and metathesis polymerization; non-classical chain polymerization; inorganic polymers; reactions and degradation of polymers; template polymerization; biological polymers.

CHEM 562, Polymer Chemistry II, Winter: Kinetics and thermodynamics of polymerization; theories for and control of step-polymerization and gelation; copolymerization composition; polymerization-depolymerization equilibria; polymer characterization; determination of molecular weight and its distribution by end-group analysis, membrane osmometry, vapor-phase osmometry, light-scattering, solution viscosity, and gel-permeation chromatography.

CHEM 563, Polymer Chemistry III, Spring: Basic concepts on the properties of materials; rubber elasticity; morphology; viscoelasticity; 

B. Special Topics Courses

In addition to the ‘permanent’ graduate courses listed in the Graduate Catalog, each quarter the graduate faculty offer a variety of special topics courses (CHEM 680-0XX & other CHEM 700-CHEM 800 level courses) worth 3 credits each. A listing of both permanent elective and special topics elective courses is given below. These courses are not usually taken during the first couple of quarters of study, because they usually have content more specialized than that of the core courses and are often more research-oriented. Consult the Graduate Catalog and the quarterly class listing schedule for more information.

Several elective courses are seminar-style courses in the various areas of Chemistry. Not all courses are offered every year, so if you are interested in a particular course you should contact the listed faculty member for course schedule information. Note that the number of these course credits that can be counted toward the requirements for the M.S. or Ph.D. is not unlimited (particularly for seminar-type courses); you should consult the Graduate Advisor regarding this issue. This also applies to CHEM 865 (Chemical Research Seminar), credit for which can be counted once toward the M.S. degree.

Notes:
1. These courses have been offered regularly recently.
2. This course has CHEM541 as prerequisite/co-requisite.
3. Should not be taken for more than 6 credits total.
4. This course is normally scheduled to meet almost weekly during the fall, winter, and spring quarters. All full-time graduate students are expected to attend department seminars every term unless they have a teaching or class conflict.
5. For M.S. - thesis option candidates only.
6. Enrollment for “Ph.D. Candidates” only.
VI. Selection of Research Advisor

All graduate students wishing to engage in research are required to select a Research Advisor who is a full-time, tenure-track faculty member in the department. It is possible to perform graduate research under the direction of one of the research faculty associated with the department as a co-advisor, but the Research Advisor must be in full agreement with the arrangement.

After arriving at Drexel, a Ph.D. student should speak with as many of the faculty as possible, including all those in the student’s major area of interest, about present and future research plans. It is required (see Departmental C-2 form) that you interview at least six faculty members about research. Indeed, before commencing any research in association with a faculty member, you must submit the Departmental C-2 form signed by those faculty members interviewed before the choice of Research Advisor is approved by the Department. On the C-2 form you must list your top three choices for Research Advisor in order of preference; the department will place you with the first eligible faculty member after confirming her/his interest in serving as Research Advisor and the presence of an available TA or RA position in that group. You and your Research Advisor will then jointly designate the area(s) in which you will do your cumulative exams.

Both full- and part-time Ph.D. students must choose their Research Advisor no later than the end of the first quarter of the first year. When talking to faculty members about their research, feel free to ask for reprints of recent papers, preprints of papers in press, and planned research as reflected in submitted research proposals. When both you and the faculty member reach agreement regarding the general area of research to be done for the Ph.D. thesis, you should fill out Graduate Studies Form D-2. Thus, you will be expected to start research at the beginning of your second quarter of residence at Drexel. If you intend to obtain a thesis-option M.S. degree, it’s advisable to commence that research as soon as possible as well.

All C-2 forms will be processed by the graduate faculty after the fall term concludes and the firm deadline for submitting the C-2 form will be the last business day of final exams week for the fall term. For the 2011-12 academic year, that day will be Friday, December 9, 2011.

Even with the best planning it sometimes becomes necessary for a student to switch Research Advisors. It is recommended that the student discuss the situation with either the Graduate Advisor or Department Head prior to completing and submitting a new C-2 form. Students may switch Research Advisors once during their graduate program, and the new C-2 form must be submitted to the Graduate Advisor within 4 weeks after leaving the original Research Advisor’s group. Except under exceptional circumstances approved by the Graduate Curriculum Committee and Head of Department, switching Research Advisors for a second time is not permitted.
VII. Appendices

A. Department Directory

1. Chemistry Department Personnel

Interim Head of Department
   Dr. Reinhard Schweitzer-Stenner

Interim Associate Department Head
   Dr. Joe P. Foley

Graduate Advisor
   Dr. Elizabeth T. Papish

Graduate Curriculum Committee
   Dr. Joe P. Foley, Chair
   Dr. Jean-Claude Bradley
   Dr. Haifeng (Frank) Ji
   Dr. Elizabeth T. Papish
   Dr. Kevin Shuford
   Mr. Christopher Castillo

Safety Committee
   Dr. Kevin Owens, Chair
   Dr. Anthony Addison
   Dr. Anthony Wambsgans
## 2. Chemistry Department Faculty

B. Timeline Checklist

Attendant to several of the items documented in this handbook there are formalities that must be observed. You may obtain the necessary forms online from the chemistry department’s website (http://www.drexel.edu/coas/chemistry/) and the Provost’s website at http://www.drexel.edu/provost/graduatestudies/forms.html; these forms should be filed at the appropriate times. **It is very important for you to attend to the timely filing of each form since you will be held responsible for meeting various deadlines (see table below).** For full-time students who typically enter our program in the fall quarter, the second quarter on this checklist will be the winter quarter. For some requirements (e.g., the Thesis Proposal Seminar) it is understood that part-time students are expected to progress at a slower rate than full-time students. You are considered to be full-time in the program if you register as a full-time student or receive any stipend from the University while enrolled in any graduate courses.

### Notes

Further detailed information is contained on the forms themselves.

1. After obtaining the appropriate signatures from your Research Advisor and/or committee members, all University forms (D-1 through D-7 and the Completion Form) must be submitted to the Graduate Advisor, who will forward them to the Graduate Studies Office; Department forms (C-2 through C-4) must be submitted to the Graduate Advisor (with the necessary signatures).
3. The Graduate Advisor or Chair of the Graduate Curriculum Committee can check over your coursework with you.
4. Deadline strongly recommended by the chemistry department; *university deadline* is “at least three months prior to the final defense.”
5. An electronic copy may be substituted for the printed dissertation if it is acceptable to the committee member.

### C. Department Forms

1. Graduate Research Advisor Interview Form (Form C-2, revised 12/14/11)
2. Ph.D Thesis Proposal Seminar Scheduling and Committee Form (Form C-3)
3. Ph.D Thesis Proposal Seminar Evaluation Form (Form C-3a)
4. Masters Thesis Review Committee Form (Form C-5)

Form C-2: GRADUATE RESEARCH ADVISOR INTERVIEW FORM

STUDENT NAME: ____________________________________________

I am interested in starting my _____ M.S. thesis or non-thesis research or _____ Ph.D. thesis research

Interviewed faculty signatures (below)*: Date:

__________________________________________

__________________________________________

__________________________________________

__________________________________________

__________________________________________

__________________________________________

__________________________________________

Having interviewed the above faculty members (at least 6), I submit my choices of faculty advisor as

__________________________________________ (first choice)

__________________________________________ (second choice)

__________________________________________ (third choice)

Based on faculty eligibility and pending his/her agreement, ______________________________ is

named as your Research Advisor.

Departmental full-time Graduate Advisor or Department Head signature:

__________________________________________ Date: ________________

I agree to act as research advisor to the above student. The student's "specialty area" for Ph.D. cumulative exams will be: ________________________________.

Research Advisor signature ____________________________ Date: _____________

If a co-advisor is also selected, this person is ________________________________

Co- Advisor signature ____________________________ Date: _____________

Submit completed form to the Graduate Advisor. Ph.D. students must also submit Drexel forms D1, D2 & D5.

* You must be sure to include all untenured faculty (Dr. Elizabeth Papish, Dr. Kevin Shuford, and Dr. Jun Xi). A complete list of chemistry faculty may be found at http://drexel.edu/chemistry/contact/facultyDirectory/.

Ph.D. THESIS PROPOSAL SEMINAR EVALUATION FORM

STUDENT NAME: ______________________ Research Advisor: ______________________

Title of Thesis Proposal Seminar:
________________________________________________________________________________

Thesis Proposal Seminar Results
We have examined the above named student on ____________________ (date) at _______ (time).
Based on the student's presentation and answering of questions:
_____ We recommend that the student has satisfactorily met the Thesis Proposal Seminar requirement.
_____ We recommend that the student has not satisfactorily met the Thesis Proposal Seminar requirement, and suggest the following course of action on her/his part:
__________________________________________________________________________________

Thesis Proposal Seminar Committee
Each committee member must sign below to show either agreement or dissent with the overall result.

Agree:
   Chair ______________________ Signature ______________________
   Name ______________________ Signature ______________________
   Name ______________________ Signature ______________________
   Name ______________________ Signature ______________________
   Name ______________________ Signature ______________________
   Name ______________________ Signature ______________________

Dissent:
   Name ______________________ Signature ______________________
   Name ______________________ Signature ______________________
   Name ______________________ Signature ______________________

Research Advisor signature ______________________ Date: _________________
Graduate Advisor signature ______________________ Date: _________________

Submit completed form to Departmental Graduate Advisor.
