Member of D. C. E.

Russell graduated from Norristown High School and entered Drexel the same year. He is blessed with noble traits of mind and character. He is very popular among the fellows. We are confident that he will be a successful engineer because he has the sterling qualities of honesty and fairness, which every good engineer should have. He has always applied himself ardently to his school work and has earned the admiration and respect of the Faculty.

During the summer vacations he worked for the Montgomery County Gas and Electric Company on electrolysis surveys, and also in the Special Inventory Department of the same firm.
Russell Ganser is another of those timetable fiends. He has a timetable just like Miller's and he lives in the same place; that is to say, Norristown, but the fellows don't hold that against him. Russell's favorite amusement is working in the physics lab. Not content with the regular work given by the Faculty, he decided to work there during his Senior year also. How he could ever break this habit is more than I know, and though I am a friend of Russell's and would be the last to say anything against him, yet the truth must be told. In the future, in recognition of his services in the lab., the Faculty have decided to make him a professor of physics.

Speaking of professors reminds one of Wilkins because he is more like one than a professor himself. He knows and can do so much that it is difficult to foretell his future alone. But there are two other men of about the same size and of the same studious disposition as he is. They are Luther Delp and Adolph Ruff. These three know more than the rest of the class put together. So I predict that the fate of these men will be to form a union for the purpose of collecting all the engineering knowledge, facts and data that there is, and I know that the undergraduates will be pleased if they collect it so thoroughly that there will be none left to teach.

In mechanical lab. we have what is known as the International gang. Let me introduce its members. They are Mr. Lee, of China; Mr. Castaner, of Spain, and Mr. Wolf, of Chestnut Hill, all foreign countries, as you will notice.

"Chop" Lee knows more about engineering than the man who invented it. I know this to be a fact, for Lee told me so himself. When he gets his diploma Chop is going back to China, and I can easily see that when he hits home with all his knowledge he will be elected president of the new republic, to say the least.

"Joe" Castaner is the best gentleman that we have in the class. Always pleasant and smiling even when things do go wrong, he has the manners and looks of a true-born count, and I predict that when he reaches home the King will make him one in name as he is now in manners.
