

## **BUSINESS AND ENGINEERING**

The Business and Engineering (B&E) major combines two of Drexel's most exciting programs, linking business and engineering to provide students with expertise in both fields.

The B&E program contains a broad-based business and engineering curriculum, enabling graduates to work successfully in technically oriented business positions. Students complete a set of broad functional business core courses along with a firm foundation in science, mathematics, and engineering. Students also study more deeply the areas of operations management, entrepreneurship, finance, and marketing, while also studying the functional areas of engineering. Graduates of this program will be well prepared to participate in innovative technological efforts in business. The major gives students the opportunity to learn important concepts in functional business areas such as accounting, economics, finance, information systems, law, marketing, organizational behavior, operations, and statistics.

Students wanting specific information about the major are encouraged to stop by the department office in Gerri C. LeBow Hall, call the department at 215.895.2111, or visit their website at [lebow.drexel.edu/academics/programs/undergraduate/degrees/business-and-engineering](http://lebow.drexel.edu/academics/programs/undergraduate/degrees/business-and-engineering).
