2. Seatpan depth:		8. Mouse height:			
3. Seatpan width:		9. Monitor height:			
4. Armrest height:		10. Monitor distance:			
5. Armrest width:					

NOTES

- 1. Seatpan height is measured as the distance from the floor to the seatpan (at the side of the seatpan) with the user in the chair. Seatpan height is based on stature considering the height of the shoe heels.
- 2. Seatpan depth is measured as the distance from the back support to the front of the seatpan and allows for 1.5 to 2" of space between the back of the knee and front of the seatpan.
- **3. Seatpan width** is measured as the distance side-to-side of the seatpan and allows for 1.5 to 2" of space between the thigh and side of the seatpan.
- 4. Armrest height is measured as the distance from the top of the armrest to the floor.
- 5. Armrest width is measured as the distance between the outside edges of the armrest.
- 6. Worksurface height (writing/reading desk) is measured as the distance from the floor to the top surface of the worksurface.
- 7. Keyboard height is the distance from the floor to the top surface of the platform that the keyboard rests on. (It is not to the top of the keyboard.)
- 8. Mouse height is the distance from the floor to the top surface of the platform that the mouse rests on. (It is not to the top of the mouse.)
- 9. Monitor height is height from the floor to the top of the monitor screen (not the top of the monitor bezel.)
- **10.** Monitor distance is from the eye position (bridge of the nose between the eyes) to the screen.
