Enabling Hyperion in Microsoft Edge

The following steps are to enable Microsoft Edge to access Hyperion. This only needs to be completed one time to enable Hyperion. If you encounter any issues with the instructions, please contact AIS.

1. Connect to the VPN using the Cisco AnyConnect client. Do not use the web-based VPN.
2. Close all open Edge windows.
3. Open the software center by clicking on the start button in the bottom left corner and typing ‘Software Center’. Click on the application to open it.

4. Click on the application ‘Enable Hyperion MSEdge Support’ then click the ‘Install’ button. If you do not see the application press the F5 key to refresh the list. If that is not successful, please contact the Drexel IT Help Desk or your local IT support.
5. Verify the installation was successful by opening Edge and navigating to edge://compat

6. Confirm the domain list contains ‘//reporting.drexel.edu’. If you do not see the domain, click on the ‘Force update’ button.

7. Navigate to ‘drexel.edu/reporting’ and login with your Drexel One credentials
8. Check that you can navigate Hyperion by clicking on folders and reports. Depending on your monitor setup you may need to adjust the browser zoom until you are able to navigate with the mouse.

9. When you open a report for the first time you may receive a ‘Pop-up blocked’ warning on the right in the URL bar. Click on the warning and select ‘Always allow pop-ups on this page’.

10. Try opening reports to verify that they can be viewed correctly. It’s possible that the size of the screen needs to be changed from 100 to 67%.
