

Development of the M-CHAT-S (School Age Screener for Autism Risk)

Why?

The goal is to develop and test a screening questionnaire for ASD risk for young school age children (age 5 to 8 years).

Where?

- Interviews or focus groups will be conducted remotely (over phone or Zoom)
- Surveys will be completed online

Who is this study for?

- Parents of children ages 5-8. We want some parents of children on the autism spectrum, some with other delays or learning difficulties, and some with typical development
- OR
- Educators (teachers, special education teachers, intervention providers) with at least 5 years of experience working with students on the autism spectrum

What will be expected of the participant?

- Participants will either complete (1) an interview or focus group or (2) pilot test the questionnaire
 - For interview, participants will give feedback on potential screener items over phone or Zoom
 - For pilot testing, participants will be asked to complete the newly developed questionnaire and two to three other questionnaires online
 - Some may be asked to complete again, 1-2 weeks later
- Participation will take no more than 60-90 minutes.
- Interview participants will receive \$100 for being in the study
- Pilot test participants will receive \$50 for being in the study
