

## The Impact of Traits on Social Cognition in Individuals with and without Autism Spectrum Disorder

The goal of this study is to learn how people understand moving shapes. This includes how thoughts, feelings, and experiences influence what people see.

**WHO:** Adolescents and adults with and without autism spectrum disorder between the ages of 16-35 years

**WHAT:**

1. Attend one 4-hour study visit or two shorter visits at the A.J. Drexel Autism Institute (AJDAI) or the AJDAI Mobile Assessment Unit
2. Answer questions, watch videos of moving shapes, and complete tasks on a computer

**BENEFITS:** You may find study tasks interesting.

**BONUS:** You will be given up to \$20 for your time.
