

Curriculum Vitae

JANA M. MOSSEY, PH.D., M.P.H., M.S.N.

**Business Address:** Drexel University  
School of Public Health  
1505 Race Street  
Mail Stop 1033  
Philadelphia, PA 19102  
(215) 762-8245

**Education:** University of Pennsylvania School of Nursing, Philadelphia, PA  
Area of Study: Adult Mental Health Nursing  
Degree Received: Master of Science in Nursing, 1993

School of Public Health, University of North Carolina at Chapel Hill  
Area of Study: Epidemiology  
Degree Received: Doctor of Philosophy, 1976  
Thesis title: *The effects of patient labeling in hypertension*

School of Public Health, University of North Carolina at Chapel Hill  
Area of Study: Epidemiology  
Degree Received: Master of Public Health, 1972

Columbia University School of Nursing, New York, New York  
Area of Study: Nursing  
Degree Received: Bachelor of Science, 1967

Mount Holyoke College, South Hadley, Massachusetts  
Area of Study: Religion - Political Science  
Degree Received: Bachelor of Arts, 1965

**Postgraduate Training:**

1980 - 1981 Post Doctoral Fellow  
Yale University Department of Epidemiology and Public Health  
Area of Study: Psychosocial Epidemiology

**Current Employment**

2003-Present Professor, Department of Epidemiology and Biostatistics, School of Public Health, Drexel University, Philadelphia, PA (Formerly, School of Public Health, MCP Hahnemann University, Philadelphia, PA)

**Clinical Experience - Psychiatry:**

- 1989 - 1993 University of Pennsylvania School of Nursing, Master's of Nursing, Approved Clinical Training in Psychiatric Nursing:
- Philadelphia Geriatric Center - Individual Psychotherapy with Geriatric Patients
- Department of Psychiatry, Medical College of Pennsylvania at EPPI - Intake Evaluations, Family and Individual Therapy
- 1992 - 1993 Group Psychotherapy as Co-therapist of Eugene M. Abroms, M.D., 216 Glenn Road, Ardmore, Pennsylvania, 19003
- 1990 - 1995 Principal Investigator or Research and Clinical Director of the Treatment Program, Interpersonal Counseling for Depression that was delivered during the NIH funded research project: "Nurse Intervention with Medically Ill Elderly".
- 1993 - 1997 Medical College of Pennsylvania at EPPI, Outpatient Individual Psychotherapy

**Professional Memberships:**

American College of Epidemiology  
 Society for Epidemiological Research  
 American Public Health Association  
 Gerontological Society of America  
 American Academy of Pain Medicine

**Research Experience/  
 Grant Support**

**Principal Investigator:** Funding Agency: National Institute of Aging: Quality of Life, Health, and Valuation of Life by Elders: 2001 – 2004. (Annual project award \$350,000)

The purpose of this longitudinal study of older individuals is to investigate the factors that affect an individual's quality of life in his or her later years. Dr. Mossey was asked to assume the role of Principal Investigator after the death of Dr. Powell Lawton, the initial investigator. During the remaining years of the study, the surviving members of the initial cohort of 600 persons will be interviewed for the fourth time. This will permit evaluation of changes in health states, attitudes, and life quality over a 6 year period.

**Principal Investigator, Quantitative Studies:** Funding Agency: National Institute of Aging, U.S.D.H.H.S. "The Meaning of Self-Rated Health," 1997-2003. (@250,000 direct costs through 7/02). This study is conducted with Dr. Mark Luborsky, Wayne State University, Detroit Michigan.

This longitudinal study of community-dwelling elderly aims to identify the meanings individuals ascribe to their self-rated health, the factors that lead to change in self-rated health, and the consequences of such change. Since the publication in 1982 of the paper by Mossey and Shapiro showing a strong, independent relationship between risk of dying and self-rated health, many investigators have studied the importance of self-rated health for mortality,

morbidity and use of health services. While the studies consistently confirm the initial findings of Mossey and Shapiro, no comprehensive study has been conducted to identify the meanings individuals ascribe to their self-rated health. This proposed research is the first of its kind. Quantitative and qualitative research methods will be used.

**Collaborating Investigator:** Aging in Manitoba Social Sciences and Humanities Research Council (SSHRC) Research Initiatives I & II, 1998 – Present.

This research program, supported by the Social Sciences and Humanities Research Council of Health and Welfare Canada, is a 30 year extension of a panel study of the health needs of Manitobans begun in 1971. This initial 1971 survey was one component of the Manitoba Longitudinal Study on Aging research program on which I was a Co-Principal Investigator with Dr. Nora Lou P. Roos and Ms. Betty Havens. In 1971, we received funding from Health and Welfare Canada to merge the 1971 survey data with the Manitoba Health Services Commission health care claims data for the years 1971 – 1978. This initial grant has been extended to include the year 2001 and additional cohorts have been added to the initial sample in 1976, 1983, 1990, 1996 and, again in 2001.

**Co-investigator/Epidemiologist,** Funding Agency: Janssen Pharmaceutica : “Uniform Outcomes Measures Research Initiative: Project Phases II and III,” 1999 – 2001. Principal Investigator: Dr. Rollin M. Gallagher

The purposes of this research are: 1) to evaluate existing Uniform Outcomes Research undertaken by the American Academy of Pain Medicine; 2) to develop a more comprehensive and user-friendly data collection tool and analytic strategy for clinicians who have been treating pain patients; 3) to reestablish a clinical practice network of pain medicine physicians who agree to capture data from consecutive pain patients seen in their practices; 4) to develop and conduct rigorous observational evaluations of the data, aggregated across all participating physician practices, to develop evidence based guidelines for clinical practice of pain patients.

**Principal Investigator,** Funding Agency: National Institute on Aging, U.S.D.H.H.S. "Cost of Depressive Symptoms in the Elderly," 1993-1997. Awarded: \$660,432 (direct costs).

This 24-month longitudinal study of elderly residents of continuing care retirement communities seeks to identify the costs (financial, psychosocial, functional) of depression and to investigate the course of depression over time. Two hundred and twenty-nine individuals have been enrolled; half of these individuals have elevated levels of depressive symptoms. Assessments take place at 6 month intervals.

**Principal Investigator,** Funding Agency: National Center for Nursing Research, U.S.D.H.H.S., "Nurse Intervention with Medically Ill Elderly," 1990-1995.

Awarded: \$676,615 (direct costs).

This randomized clinical trial was designed to evaluate the feasibility and efficacy of a short-term interpersonal therapy for medically ill elderly who have a subthreshold depression. This is the randomized clinical trial addressing subthreshold in older individuals. Individuals were randomized to special care (the short-term interpersonal therapy delivered by nurse psychiatric clinical specialists) or to usual care. Individuals were followed for 12 months. Analyses showed the intervention to be feasible, acceptable and efficacious in terms of depressive symptom reduction.

**Principal Investigator**, Funding Agency, National Institute on Aging, U.S.D.H.H.S., "Determinants of Recovery Among Older Women," 1984-1989. Awarded: over \$600,000 (direct costs)

This longitudinal study aimed to identify the medical, functional and psychosocial determinants of recovery from hip fracture in older, Caucasian women who had been ambulatory and community dwelling prior to hip fracture. This was the first large longitudinal and comprehensive study of older community dwelling, ambulatory and cognitively intact women that sought to identify both psychosocial and biomedical determinants of hip fracture recovery. Two hundred and nineteen women were enrolled shortly following a surgical repair of their hip fracture in one of 17 hospitals in the Philadelphia area. They were followed for 12 months with assessments at baseline, 2, 6 and 12 months after hip fracture. Factors identified as predicting recovery included: age, prefracture physical function, and depressive symptoms. Individuals with depressive symptoms that persisted over the 12 month follow-up were seen to be 9 times less likely to recover by 12 months than others of the same age and prefracture physical function.

**Committees and  
Administrative Service  
Since 2000:**

**Institutional:**

Chairperson, Search Committee, Chair Department of Health Policy and Management, Drexel University School of Public Health, 2008-2009.

Member, Research Review Committee, Intramural Research Grant Program, Drexel University, 2005 – Present.

Member, Research Evaluator Committee, University Annual Research Day Poster Session, 2004 – Present

Chairperson, Appointments and Promotion Committee, Drexel University School of Public Health 2000 – Present

Chairperson, Tenure Committee, Drexel University School of Public Health, 2004 – Present.

Member, Committee for Faculty Affairs, Faculty Senate, Drexel University, 2005-Present

Chairperson, Appointment, Promotion, and Tenure Committee, Drexel University

School of Public Health, Philadelphia PA. 2005 – Present

Member: Institutional Review Committee, Drexel University, 2003 – present

**Extra Institutional:**

Member: Scientific Advisory Committee, Treatment of Depression in Home Care Populations. Department of Psychiatry, Cornell University School of Medicine: Research funded by National Institute of Mental Health: 2001- 2004

Member: Scientific Advisory Committee: Uniform Outcomes Measure Project: American Academy of Pain Medicine: 1998- 2003

Reviewer: *The Gerontologist*, 2000 – Present

Reviewer, *Psychology and Aging*, 2004 - Present

Reviewer: *Medical Care*, 1999 – Present

Reviewer: *Clinical Journal of Pain*: 1998-present

Member, Editorial Board; Aging Section, *Pain Medicine*, 1999 - present

Reviewer: *American Journal of Geriatric Psychiatry*, 1999 - Present

**Teaching Experience/**

**Courses Taught:**

**Since 2000**

Course Director, Applied Survey Research for Epidemiology, Drexel University School of Public Health, Required Course Epidemiology Majors; 2006 – Present

Course Co-Director: Epidemiology and Biostatistics, Drexel University School of Nursing, 2004 - Present

Course Director: Chronic Disease Epidemiology, Drexel University School of Public Health, 2006

Course Director, Psychiatric Epidemiology, Drexel University School of Public Health, 2009.

Course Director: Epidemiology for Nursing Practice, Drexel University School of Nursing and Health Professions, 2006 - Present

Course Director, Intermediate Epidemiology, Drexel University School of Public Health, 2004-2006

Course Director and Principal Faculty, Epidemiology Concentration Program, MCP Hahnemann University School of Public Health. 1998- 2004t

Course Director and Principal Faculty, Epidemiology, MD/MPH Program Years 1 and 2, MCP Hahnemann University, 1998 – 2004

**Faculty Supervisor:**

Post-Doctoral Fellows: 2

Doctoral Students: 3

Master of Public Health Students: 35
