

After obtaining her B.S. in Chemical Engineering from Drexel University in 2009, Jill started as a Development Chemist at Quaker Chemical Corporation. In 2013, she was promoted to Development Chemist II. She thoroughly enjoys developing lubricants for her customers at steel mills, and going to the sites to see her products working in the field! When she is not traveling with work, she enjoys playing with her bunnies, gardening, arts & crafts, fixing things, volunteering, and snowboarding.
