Agenda

- What does a Citation Manager do?
- What are the differences between EndNote and Zotero?
- Breakout rooms:
 - Zotero demonstration (Sarah)
 - EndNote demonstration (Kathleen)

What do Citation Managers do?

- Make your grad school life easier!

What do Citation Managers do?

- Make your grad school life easier!
 - Store all those citations from your lit searches (and the random papers you've collected)
 - Organize them (by class, by project, by topic – whatever works for you)
 - Share with classmates/colleagues for group projects
 - Help integrate your sources into your writing with appropriate citations

What do Citation Managers do?

- To repeat that last one -

Integrate your sources into your writing with appropriate citations . . .

Formatted according to your required citation style.

Zotero and EndNote

While other citation managers exist (including simple online tools such as EasyBib), Drexel Libraries primarily supports EndNote and Zotero.

Zotero

- Zotero is a free, open source developed by the [Corporation for Digital Scholarship](#) and the [Roy Rozensweig Center for History and New Media](#). It combines desk-top and web-based applications.
- Citation data and associated files can be stored locally and can be synced to online account. Free online storage is limited to 300 MB.
- PDFs, notes, images and other files can be attached to Zotero items; citations can be created from DOIs and other PDF metadata.
- Zotero supports creation of bibliographies and citations in Word, LibreOffice and Google Docs, with support for 9,000 citation styles.
- Accounts on Zotero's web application allow the creation of both public (open and closed) and private groups for collaboration.

EndNote

- EndNote is produced by Clarivate Analytics; it is available to Drexel students, staff and faculty by site license through Drexel University IT. Current version available is EndNote 21.
- Allows direct import from 500+ databases, online searching of major databases.
- Citation library is stored locally, with unlimited reference and attachment storage; can be synced to EndNote Web for online availability and sharing with collaborators.
- Retrieves full-text of journal articles via Libraries' linking utility. Attached PDFs can be annotated, highlighted and searched (full-text); citations created automatically from DOIs and other metadata.
- Integrates with Microsoft Word and Google Docs; 7000+ predefined bibliographic formatting styles; can create customized styles.
