

SALURBAL

Launched in 2017, the *Salud Urbana en America Latina* or Urban Health in Latin America (SALURBAL) Project brings together over 200 professionals from multiple disciplines to study the ways urban environments and urban policies impact the health of city residents throughout Latin America. Project findings inform policies and interventions to create healthier, more equitable, and more sustainable cities worldwide. SALURBAL is funded by the Wellcome Trust. Beginning in 2023, SALURBAL-Climate will build upon and expand our work exploring the connections between climate change and health to drive urgent policy and community action.

Drexel Urban Health Collaborative (UHC)

The Drexel Urban Health Collaborative (UHC) is Drexel University's hub for urban health data, research, training, and engagement. The UHC was created to leverage the power of data, research, education, and partnerships in order to make cities healthier, more equitable, and environmentally sustainable.
