Philadelphia Region Houses Listed For Sale: Inventory v. Sales Rate

Source: TrendMLS

% Sold = (#Sales/#Listings)
DOM is the average "days-on-market": the average number of days it takes for a listed home to sell. In a market that is evenly balanced between buyers and sellers, 40-60 days is considered the typical norm.
1 out of every 861 homes in Philadelphia is currently in the process of foreclosure, which is essentially unchanged from 1 out of every 860 homes in the previous quarter.

In the entire Commonwealth, 1 out of every 1,766 homes in Pennsylvania is in the process of foreclosure, which is down from 1 out of every 1,418 homes in the previous quarter.

Source: http://www.realtytrac.com/statsandtrends/foreclosuretrends/pa
South Jersey’s foreclosure rate continues to remain the highest in the region.

Of the top five counties in NJ with the highest foreclosure rate, four of them are located in South Jersey, with an average foreclosure rate of 1 in every 284 homes. This is well above the statewide average of 1 in every 560 homes.

Moreover, the foreclosure rate for South Jersey rose sharply this quarter, from its previous level of 1 in every 419 homes in the previous quarter.
After several quarters of improvement, Delaware’s foreclosure rate rose in Q1:

- 1 out of every 640 homes in New Castle County, up from 1 out of every 804 homes in the previous quarter.

- 1 out of every 464 homes in Kent County, up from 1 out of every 523 homes in the previous quarter.

- 1 out every 1,183 homes in Sussex County, up from 1 out of every 1,230 homes in the previous quarter.

- Statewide, the foreclosure rate increased from 1 in every 819 homes to 1 in every 695 homes.
Housing's Road to Recovery: %Lost v. %Recovered by Metro Area

The length of each bar below the horizontal axis represents the total % decline in house prices in each major U.S. metro area from peak to trough. The total rebound (to date) in house prices is represented by the blue component of each bar, with the remainder represented by the red component. A red bar that is above the horizontal axis indicates a metro area which has fully erased its losses and whose house price levels are now above their peak during the bubble. For example, Philadelphia County's house prices fell by an average of 22% from peak to trough. To date, they have rebounded by 36% and are now 14% higher than their previous peak. By contrast, Philadelphia's suburbs fell by a similar amount, yet have only recovered 4% and thus need to rise another 17% to completely erase their losses.

*Empirically estimated by Kevin C. Gillen, Ph.D.  All other metros courtesy of S&P Case-Shiller.
