ABSTRACT: 2014 ELAM Institutional Action Project Poster Symposium

Project Title: The National School of Tropical Medicine: Creating Innovation through Novel Strategic Partnerships

Name and Institution: Maria Elena Bottazzi, PhD, National School of Tropical Medicine, Baylor College of Medicine (NSTM-BCM), Houston, TX

Collaborators: Peter J. Hotez, MD PhD, NSTM-BCM, Houston, TX and Richard Sanker, Ph.D., Baylor University, Waco, TX

Background, Challenge or Opportunity: In 2011, Baylor College of Medicine established the first comprehensive school of tropical medicine in the United States. The National School of Tropical Medicine (NSTM) has a four-fold mission: 1) Research, 2) Clinical, 3) Education, and 4) Policy. In education, NSTM has created a Diploma in Tropical Medicine for physicians and physicians-in-training, a seminar series and a variety of workshops and symposia in Tropical Medicine and has established a unique intensive two-week Tropical Medicine Summer Institute tailored for Baylor University (BU) pre-health undergraduates. The Summer Institute includes comprehensive laboratory training and one-on-one instruction focused on major tropical diseases in developing countries. Building on the ongoing success of the Summer Institute, NSTM and BU sees great opportunity to expand this strategic partnership targeting NSTM as an extension of BU creating novel opportunities in Houston for the transition of undergraduates into graduate education specifically in the areas of tropical medicine and global health.

Purpose/Objectives: Explore, plan and establish a pilot/demonstration project for the expansion of the NSTM-BU strategic partnership and create an operational model for innovation in tropical medicine and global health education. This project evaluated the feasibility of expanding the Tropical Medicine Summer Institute into a joint Bachelor in Science/Master in Science (BS/MS) in Tropical Medicine and Global Health using a “4+1” model where students would spend 4 years in Waco and 1 year in Houston.

Methods/Approach:
Exploration/Needs Assessment: Initiated discussions with leaders at BU with the goal to perform a landscape and needs assessment (internally within each institution and externally) and create a SWOT analysis to establish feasibility for the expansion of the Summer Institute into a new BS/MS in Tropical Medicine and Global Health.
Planning Phase/Engagement of Stakeholders: Established key novel strategic meetings at BCM-NSTM and at BU to determine the organizational needs, to study best-of-class planning tools and to make recommendations for a planning approach that would adhere to the organization's vision and aspirations.
Pilot/Demonstration Project: Initiate the planning process to create the 4+1 BS/MS in Tropical Medicine and Global Health as a proposed pilot/demonstration project and expand the ongoing partnership between NSTM and BU.

Outcomes and Evaluation Strategy: NSTM leads efforts to develop new training programs for a new generation of students, physicians, and scientists in the area of tropical medicine. NSTM recognized that BU has a unique commitment to Christian mission training in the area of global and missionary health and medicine. The following outcomes will be presented: results of the SWOT analysis, summary of strategic meetings and their outcomes; timelines, achieved and proposed milestones. The evaluation strategy will include student/faculty surveys and site visits, tracking faculty and student engagement, financial planning and tracking and assessment of student competencies and placement.
