Goals and Objectives for ENT Practicum
PGY-2 and PGY-3
*Optional for PGY-4 and PGY-5

PGY-2 and PGY-3
Patient care:

- Learn how to perform a proper head and neck exam using direct and indirect laryngoscopy. Exam also includes examining the LN of the neck and supraclavicular areas
- It is recommended to review head and neck anatomy prior to practicum to improve level of comprehension at the practicum session

Medical Knowledge:

- Apply above knowledge to patient care

Practice Based Learning:

- Facilitate learning of students and professionals in ways to improve their skills. Continue to practice new found skills in simulation setting

Interpersonal skills/communication:

- Communicate procedural side-effects with the patient and describe their purpose

Professionalism:

- Demonstrate sensitivity to the patients by respecting their potential concerns about procedure and being able to describe the benefits

Teaching Methods:

- Residents are taught by ENT attending physician one to one. At this particular session the teaching is through practice of the nuances of a good head and neck exam but also a lecture on scoping techniques and about the scope itself

Assessment Methods (Residents):

- Each resident is expected to fill out an evaluation of session
Assessment Methods of Program:

Each resident is expected to fill out evaluation of session annually

Supervision:

• One on one by the attending physician

Educational resources:

• Residents have access to the Drexelmed library 24/7

• Basic Radiation Oncology, Anatomy, Radiology, Medical Oncology, Physics and Radiation Biology texts are available in the Radiation Oncology library/conference room or in the residents’ room

• Pertinent journals are available on-line. There is also a list of suggested articles, by site, in our Residency Program’s Policy and Procedure manual located in the residents’ room

• Access to NCCN guidelines are accessible and are free on line along with guidelines from NCI, ACS, ASTRO
