GOALS AND OBJECTIVES FOR TUMOR BOARDS

PGY-2

Goal:
- understand the basic disease process by attending tumor boards, remaining attentive and interacting with multidisciplinary teams (radiology, pathology and oncologic disciplines).

Objectives:
- resident shall be capable of organizing power point presentation of their patient
- present concise H/P findings along with work-up
- comment on treatment plan

Responsibilities:
- attend all tumor board
- come on time
- review case with attending
- be ready to present the patient’s history and physical findings and brief treatment plan
- Become familiar with NCCN guidelines for the disease site and AJCC staging
- Sign in attendance sheet
- Fill out evaluation form which is kept by tumor registry

PGY-3

Goal:
- all the above and in addition to deepening understanding of the basic processes of the disease, have a basic understanding of cancer biology, radiation biology and physics.

Objectives:
All the above and in addition to
- Present H/P on patients with work-up and more detailed treatment plan.
- Review the literature for the case to assist in discussions
Responsibilities:

- Review NCCN, guidelines, Adjuvant on-line, become familiar with clinical trial design and assist in opening trials at Hahnemann or Christiana.

**PGY-4**

Goals:
All the above and in addition to
- Have a thorough understanding of the disease processes as relating to all the modalities involved in cancer care (pathology, radiology, medical oncology, radiation oncology)
- Be able to discuss biological aspects of disease and be able to comment on the physics of the treatment as necessary
- Know NCCN guidelines well
- Know staging by site

Objectives:
All the above
- To be able to present in detail H/P and treatment plan
- To be able to discuss pertinent literature
- Begin to be able to lead discussion

Responsibilities:
All the above and in addition
- Contact tumor registry to assist in managing cases for each tumor board

**PGY-5**

Goals:
All the above and in addition
- Have a complex understanding of the disease processes as relating to all the modalities involved in cancer care (pathology, radiology, medical oncology, radiation oncology)

Objectives:
- Be able to lead discussion of tumor board and mentor more junior residents
- Understand trials available at institution
- Understand clinical trial design and be available to comment

Responsibilities:
- Interact with Tumor Registry to coordinate conferences with other departments
