4.2 million Americans are blind/visually impaired (BVI), and are taught spatial navigation by specialists.

- Only 240 orientation and mobility specialist centers in the US
- Specialists are becoming more scarce

**Need**

**SOLUTION**

V.I.S.O.R. finds an exit sign, then tells the user its location and type.

We aim to make route-learning independent, quick, and reliable.

**Market Potential**

- Visual disability specialist centers
- Schools & learning institutes for the BVI
- Americans who are BVI

**Value Proposition**

BVI users will gain a newfound independence as they create mental maps of exit routes with V.I.S.O.R.
